

EPILYUM - GENERAL MACHINERY CATALOGUE

About Us

Introduction

Epilyum is an innovative company specializing in aesthetic and medical technologies, offering advanced devices for Dermatologists. Its product range includes laser hair removal systems, CO₂ lasers, picosecond lasers, AI Skin Reveal analyzers, HIFU, and RF devices. With a focus on science, safety, and performance, Epilyum provides reliable solutions that combine cutting-edge technology with proven clinical results.

Our Vision

At Epilyum, we envision a world where advanced medical aesthetic technology redefines beauty and wellness. We are committed to innovation, delivering breakthrough technology solutions that empower professionals and enhance patient confidence. By blending science with sophistication, we aim to be the global leader in medical aesthetic devices, setting new standards in safety, efficacy, and comfort.

Our Mission

We strive to revolutionize the medical aesthetic industry with next generation technology that delivers superior results and an exceptional user experience. Our mission is to develop high-performance devices that are safe, effective, and designed for all skin and hair types. With innovation at our core, we continuously push the boundaries of medical aesthetics, empowering practitioners and transforming patient care.

EPILYUM

DISCOVER THE CONVENIENCE

Laser Hair Removal

Epilyum Laser Hair Removal is a professional new upgrade IPL device for fast, safe, and effective hair removal. It features dual handpieces, advanced air cooling (-35°C), and a rectangular spot size for quick full-body treatments. Suitable for all skin types, it delivers proven results with low cost and high efficiency.

ThermiQ RF

ThermiQ Microneedling RF is an advanced skin rejuvenation system that combines precise microneedling with radiofrequency energy. It works by creating microchannels in the skin while delivering controlled heat deep into the dermis, stimulating collagen and elastin production.

Thermilif HIFU

ThermiLif HIFU is a machine integrates innovative, world-first technology to deliver more focused and effective treatments. By combining two powerful energy sources, it achieves exceptional results in skin lifting and shaping.

Revive IPL

Epilyum IPL is an advanced Intense Pulsed Light (IPL) system designed to address over 20 skin concerns including acne treatment, pigmentation correction, vascular lesion removal, skin rejuvenation, and hair removal. Utilizing Optimal Pulse Technology (OPT) and Multiple Sequential Pulsing (MSP), Additionally with its advanced cooling system Epilyum ensures safe, effective, and precise treatments with minimal discomfort.

PICTRON 11

Pictron 11 is an advanced picosecond laser for tattoo removal, pigmentation, and skin rejuvenation. It uses four wavelengths and ultra-short pulses (550–750ps) for precise, safe, and fast results on all skin types. Its dual-pulse technology and multiple handpieces ensure effective treatment for both dark and colored tattoos, scars, and wrinkles.

AXISONE CO2

The Epilyum AxisOne CO2 is a Super Pulse CO2 Fractional Laser system that uses RF Metal Tube technology for high power and consistent energy delivery. It features multiple modes, including Fractional, Ultra and CW (Continuous Wave), and is used for procedures like Deep Resurfacing, Rejuvenation, and Gynecological Applications.

AI REVEAL

The EPILYUM AI REVEAL Skin Analyzer is an advanced device that uses 8-spectrum imaging and AI algorithms to accurately analyze over 17 facial skin concerns. It generates high-resolution 3D facial imaging and provides personalized skincare plans and product recommendations.
